Nextra® vs. K-Wire
Redefining the Standard of Care

Level Two, Prospective, Multi-Center, Randomized Study

- 91 patients randomized to receive either K-wire or Nextra® for hammertoe correction
- Base line to 6 month results

**Fusion**

- **UNION**
  - Nextra®: 84.4%
  - K-Wire: 16.3%

- **GAP**
  - Nextra®: 8.9%
  - K-Wire: 44.2%

- **5.2 X** higher rate of bone fusion compared to K-wire.
- **80%** decreased gap compared to K-Wire.

**Foot Function Index**

The Nextra® Hammertoe Correction System resulted in clinically significant better composite Foot Function Index (FFI) scores during the postoperative phase, and this displayed a bimodal course of improvement early in the postoperative phase and again later (1 and 3 weeks and 3 and 6 months), including greater pain relief at 1 and 6 weeks postoperative, less disability at 1 and 3 weeks and 6 months postoperatively, and less limitation of activity at 1 and 3 weeks and 3 and 6 months postoperatively.¹

It’s time for a New Standard of Care

Nextra® Hammertoe Correction System

K-Wires:
- Poor Fixation
- No Rotational Control
- Pin Track Infection
- Pain
- Patient Perception of Protruding Wire

Nextra®:
- Superior Bone Purchase
  - Stable and Secure
- Adjustable Bone-to-Bone Apposition
  - Aids Bone Fusion
- Improved Patient Satisfaction
- Reversible Assembly
- Natural Anatomic Design with 10° Angulation
